NOTE: This is a "working draft' sequence. It currently
consists of 16 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (bases 1 to 136753)

The secondary metabolite has a benzene ring skeleton free from substitution at the para-position by a nitrogen-containing functional group, thereby enabling the production of a secondary metabolite with a benzene ring skeleton substituted at the para-position by a nitrogen-containing group. The transformant organism of the present invention has been produced by transformant organism participating in the biosynthesis pathway from chorismic acid into paraminophenylpyruvic acid. The present sequence is the coding sequence for 4-aminophenylpyruvic acid dehydrogenase (papC), from Streptomyces venezuelae. papC participates in the biosynthesis pathway from chorismic acid into p-aminophenylpyruvic acid, and so the papC gene can be used to produce metabolites for application in pharmaceuticals, veterinary drugs and agrochemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          present invention relates to a transformant having been

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문
                                                                    The present invention relates to transformants capable of producing PF1022 substance derivatives. These were obtained by transferring a gen participating in the biosynthesis pathway from chorismic acid to paminophenylpyruvic acid (biosynthesis gene) into a phenylalanine-requiring host derived from an organism producing the PF1022 substance. The transformants are producing PF1022 substance derivatives by fermentation, for use as pharmaceuticals or veterinary drugs. The prese sequence is a substance PF1022 coding sequence from Streptomyces
  Sequence
                                                                                                                                                                                                                                                                                                                                                        Novel biosynthesis gene-transferred transformants for producing PF1022 substance derivatives by fermentation, as pharmaceuticals or veterinary drugs with anthelmintic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Substance PF1022; biosynthesis; transgenic; chorismic acid; anthelmintic; phenylalanine; p-aminophenylpyruvic acid; pharmaceutical;

                                                                                                                                                                  á
                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The invention relates to a novel composition comprising a translation comprising an orthogonal tRNA (O-tRNA) and an orthogonal aminoacyl CC tRNA synthetase (O-RS), where the O-RS preferentially aminoacylates the O cc -tRNA with at least one unnatural amino acid in the translation system CC and the O-tRNA recognises at least one selector codon. A composition of CC the invention is useful for producing at least one protein comprising at least one unnatural amino acid. The protein is the Aspl2TAG mutant of CC chloramphenicol acetyltransferase (CAT) the Tyr163TAG mutant of mouse CC dihydrofolate reductase (DHFR), or a Tyr163TAG mutant of mouse CC dihydrofolate reductase comprising CHOCH His6tag. The unnatural amino acid is biosynthesised by the cell. The present sequence CC unnatural amino acid is biosynthesised by the cell. The present sequence CC represente a plasmid containing the individual genes papABC that encode CC unnatural amino acid p-aminophenylalanine (pAF)
                                                                                                                                                                                                                                                                                                                                                                                   Query Match

aminoacyl tRNA synthetase. acid,

Example 4; Page 124-127; 188pp; English.

The invention relates to a novel composition comprising a translation system comprising an orthogonal tRNA (O-tRNA) and an orthogonal aminoacyl tRNA synthetase (O-RS), where the O-RS preferentially aminoacylates the O-tRNA with at least one unnatural amino acid in the translation system and the O-tRNA recognises at least one selector codon. A composition of the invention is useful for producing at least one protein comprising at least one unnatural amino acid. The protein is the Aspl2TAG mutant of chloramphenical acetyltransferase (CAT), the Tyr163TAG mutant of mouse dihydrofolate reductase (DHFR), or a Tyr163TAG mutant of mouse dihydrofolate reductase (DHFR), or a Tyr163TAG mutant of mouse acid is provided exogenously. The translation system is a cell and the unnatural amino acid is biosynthesised by the cell. The presents sequence represents a plasmid for use in the biosynthesis of p-aminophenylalanine (pAF) in vivo

Claim 18; Page 105-106; 146pp; French

The papA and papM genes of S.pristinaespiralis are involved in the biosynthesis of 4-dimethylamino-L-phenylalanine (DMPAPA), a precursor for pristinamycin IA. The region between these two genes was sequenced and two open reading frames were identified. The first (papC) was on the complementary strand and decodes to an amino acid sequence with homology to the region of E.coli TyrA which has been implicated in aromatisation reactions. The PapC gene product is likely to be involved in a similar aromatisation of 4-deoxy 4-amino prephenate to give 4-amino phenylpyruvate during DMPAPA synthesis. The second open reading frame (papB) could be decoded to give a product with homology to the region of TyrA which has chorismate mutase activity. The second open reading frame (constant) to catalyse the isomerisation of 4-deoxy 4-amino chorismate to 4-deoxy 4-aminoprephenate acid. Disruption of the papB gene product is the used to produce strains of S.pristinaespiralis which are unable to produce the antibiotic pristinamycin I but which may be able to produce con the condified forms of it

```
pristinamycin IA. The region between these two genes was sequenced and two open reading frames were identified. The first (papC) was on the complementary strand and decodes to an amino acid sequence with homology to the region of E.coli TyrA which has been implicated in aromatisation reactions. The PapC gene product is likely to be involved in a similar aromatisation of 4-deoxy 4-amino prephenate to give 4-amino phenylpyruvate during DMPAPA synthesis. The second open reading frame (papB) could be decoded to give a product with homology to the region of TyrA which has chorismate mutase activity. The PapB gene product is likely to catalyse the isomerisation of 4-deoxy 4-amino chorismate to 4-deoxy 4-aminoprephenate. Disruption of the papB and papC genes can be used to produce strains of 5.pristinamycin I but which have belt to produce new, modified forms of it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                biosynthesis of 4-dimethylamino-L-phenylalanine (DMPAPA), a precursor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                         The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
                                                                                                                                                                                                                               acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphyse chronic obstructive pulmonary disease; leukemia; lymphoma; colon cancer; breast cancer; lung cancer; pancreatic cancer

```

The present invention relates to the cloning and sequencing of the gene cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin. The nystatin PKS is useful as antifungal antibiotics. The present sequence Streptomyces noursei nystatin PKS gene cluster English DNA gene 18

                                                                                                                                                                              The invention relates to maytansinoid produced by bacterial host cell transformed with expression vector comprising open reading frame from ansamitocin gene cluster I of Actinosymnema pretiosum. Maytansinoid is useful as a potent antitumour agent. The present sequence is A. pretiosum ansamitocin gene cluster I polyketide synthase (PKS) gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                      The invention relates to maytansinoid produced by bacterial host celtransformed with expression vector comprising open reading frame from ansamitocin gene cluster I of Actinosynnema pretiosum. Maytansinoid useful as a potent antitumour agent. The present sequence is A. pretansamitocin gene cluster I polyketide synthase (PKS) gene
                                                                                                                                                                                                                                                                                                         Novel maytansinoid produced by bacterial host cell transformed wi expression vector comprising open reading frame from ansamitocin cluster I of Actinosynnema pretiosum, useful as antitumor agent.
                                                                                                                                                                                                                                              Disclosure; Page 59-61; 160pp; English.
